

A portrait of a smiling woman with dark, curly hair and glasses, resting her chin on her hand. The image is partially obscured by a purple geometric shape on the right side of the frame.

Get ready for more learning outcomes

We are all digital learning providers now!

Because of the pandemic, online learning is now the only game in town and demand has surged.

- 82% of organizations have increased demand for digital learning from stakeholders.
- - 71% have seen demand grow from end users.
This is not a flash in the pan set to only last for lockdown.
- - Only 1% of organizations believe their approach will go back to what it was before the pandemic....

Digital learning is here to stay.

But it's not quite the revolution we might have wished for...

Despite the surge in demand, this is not the digital learning revolution we might have wished for. The story is NOT a radical reimagining of learning, but mostly a simple switch from the classroom to a virtual instructor-led sessions or a library of off-the-shelf content. Yes, performance support, curation, video, microlearning, social learning and AI are all vying for a role alongside traditional e-learning, but their adoption has a long way to go.

The revolution might have been rapid, but it was also relatively unsophisticated.

Upskilling and re-skilling – Skills are the order of the day

The pandemic has brought a surge in skills development as organizations re-assign workers and pivot business models. Upskilling and reskilling existing teams to take on new work is a significant trend.

As a result, the demand for skills-based learning continues to

Digital learning and the use of AI and machine learning to infer skills and map learning content is a headline act for 2021 and beyond.

It's time to make digital learning more human

As learning becomes more embedded in the flow of work.

Human-centered experience design has become more important than instructional design. But much of what is offered by the traditional e-learning market still lacks a distinctive edge, and there is a need to be more creative with traditional courses. Diversifying the learning experience beyond self-study is critical – especially as digital learning fatigue grows more dominant.

Learning defined on five continua

Instructional design	Human centered experience design
High degree of structure	Low degree of structure
External validation	No external validation
Classroom setting	Workplace setting
Trainer controlled	Learner controlled
External Stimulus	Internal stimulus
